

Are you feeding your Baby in a Poisonous Bottle?

Polycarbonate (PC) is a Plastic which has been typically used for making baby feeder bottles. PC contains a very dangerous and poisonous chemical **Bisphenol - A (BPA)**. **BPA** is a major known cause of Cancer, Nervous/ brain illnesses, Heart Diseases, Obesity, Diabetes, Reproductive disorders etc. in children during childhood and later in life.

Considering the above facts manufacturing & selling of baby feeding bottles made of **Polycarbonate (PC)** has been banned in USA, Canada, Europe (UK, Germany, France, Holland, Belgium, Switzerland etc.) and almost all the developed countries of the world.

All babies in all countries are entitled to the same degree of protection. This is very first time in Pakistan that, baby feeding bottles are made of **Polypropylene (PP)** which is considered as the safest available material for baby feeders. **PP** is the plastic which is free from **BPA**.

For the sake of your own baby's safety, you must get the baby feeder bottles which are made of **Polypropylene (PP)** and before buying feeder bottle always look for **BPA-FREE** sign.
